The Roses Ocean and Human Health Chair: A New Way to Engage the Public in Oceans and Human Health Challenges

Abstract

Involving and engaging stakeholders is crucial for studying and managing the complex interactions between marine ecosystems and human health and wellbeing. The Oceans and Human Health Chair was founded in the town of Roses (Catalonia, Spain, NW Mediterranean) in 2018, the fruit of a regional partnership between various stakeholders, and for the purpose of leading the way to better health and wellbeing through ocean research and conservation. The Chair focuses on three main topics identified by local stakeholders: Fish and Health; Leisure, Health, and Wellbeing; and Medicines from the Sea. Led by stakeholder engagement, the Chair can serve as a novel approach within the oceans and human health field of study to tackle a variety of environmental and public health challenges related to both communicable and non-communicable diseases, within the context of sociocultural issues.

Distribuzione e concentrazione della contaminazione da microplastiche in specie ittiche destinate al consumo umano (Mar Ligure 2018 - 2021)

CAPONE, ALESSANDRO

Abstract

The purpose of this work was to analyze the relationships between microplastics and the fish stock of some of the most common fish species in the Ligurian Sea, to assess the presence, concentration and distribution of fibers, fragments and any microspheres, analyzing the stomach contents of samples collected during the monitoring period, between November 2018 and November 2021. In this study, 588 samples were considered, for a total of 10 fish species from different environments, in a coastal area from Albisola to Cogoletto.
